PROFILE

Artificial Intelligence and Machine Learning undergraduate building production-grade AI systems, full-stack backends, and data pipelines. Built OmniProcure, an autonomous procurement platform that got accepted into TinyFish Accelerator (top 4% of 2,000+ applicants). Proficient in Python and Golang, with hands-on experience in model training, dataset preparation, system integration, debugging, and CDNs.

EDUCATION

Bachelor of Engineering - Artificial Intelligence & Machine Learning 2024 – 2028
Alard College of Engineering & Management, SPPU, Pimpri Chinchwad, Maharashtra

SKILLS & TECHNOLOGIES

Languages: Python, Golang, SQL
AI & Machine Learning: Model Training & Fine-Tuning, Dataset Prep & Annotation, RAG Pipelines, Vector Search
Infra & Operations: Docker, CDN, Memory Management, RabbitMQ
Developer Tools: Git, AI Copilots (Cursor, Claude, Codex), Hermes Agent Framework, Linux

PROJECTS

- OmniProcure** | Autonomous Sourcing & Client Dashboard Platform https://github.com/kunalraha-ai/omniprocure
- Designed and deployed a full-stack platform and custom React dashboard to aggregate and visualize real-time pricing and stock data across 140+ distributors simultaneously.
 - Integrated multi-source REST APIs via asynchronous pipelines (Promise.all) with Claude-powered part disambiguation, reducing manual sourcing from 3 hours to under 3 seconds.
 - Engineered DBMS schemas and automated 6-hour interval monitoring runs to maintain documentation of model performance, data drift, and system logs.
 - Managed integration with client IT systems, performing backend debugging, access troubleshooting, and network optimizations.
- CrowdWisdomTrading** | Multi-Agent Pipeline & Analytics Tooling github.com/kunalraha-ai/CrowdWisdomTrading
- Developed an autonomous multi-agent marketing and data analytics system powered by Nous Research Hermes framework.
 - Built specialized Python toolsets and Apify API wrappers for dynamic web scraping, data analytics, and real-time visualization via custom dashboards.
 - Executed system-wide debugging, error handling, and performance logging across dynamic creative variables and scraping modules.

LEADERSHIP & RECOGNITION

- Google Gemini Student Ambassador** 2026
- Led client and student-facing technical visits, workshops, and product demonstrations across campus to capture use-cases and drive AI tool adoption.
 - Gathered technical requirements to adapt workshops, train participants on AI workflows, and resolve client access and network issues during live sessions.
- TinyFish Accelerator** Cohort 2026
- Selected into TinyFish Accelerator Cohort 2026 (top 4% of 2,000+ applicants with OmniProcure); iterated core features based on direct client use-case capture during sprint cycles.
 - Maintained detailed documentation of model performance, platform metrics, and backend architecture for client presentations.

OPEN SOURCE

- Tracer-Cloud / opensre** | Contributor – AI SRE Agent Framework github.com/Tracer-Cloud/opensre
- Investigated, debugged, and resolved synthetic dataset execution gaps within an open-source AI SRE toolkit (8.1k+ stars, 1.1k+ forks).
 - Documented model benchmark behaviors and test suite criteria with structured code comments; PR reviewed and merged.
